

Continue Statement

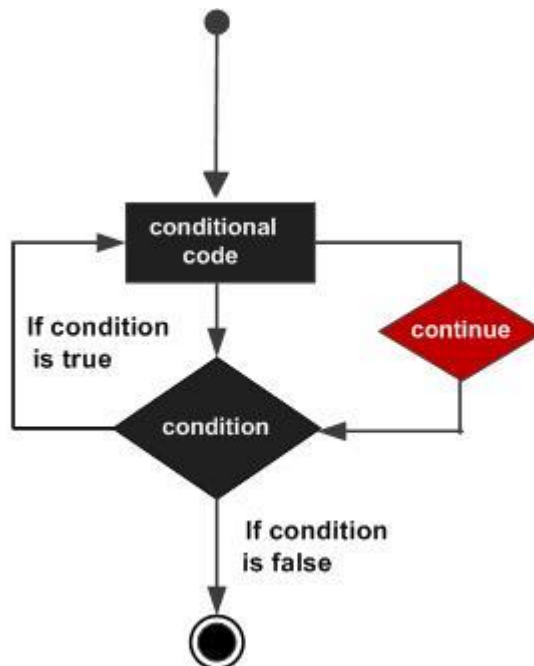

It returns the control to the beginning of the while loop. The **continue** statement rejects all the remaining statements in the current iteration of the loop and moves the control back to the top of the loop.

The **continue** statement can be used in both *while* and *for* loops.

Syntax

```
continue
```

Flow Diagram

Example

```
#!/usr/bin/python

for letter in 'Python':    # First Example
    if letter == 'h':
        continue
    print 'Current Letter :', letter
```
