

```
root = Tk()

top = Toplevel()

top.mainloop()
```

When the above code is executed, it produces the following result:

16.SpinBox

The Spinbox widget is a variant of the standard Tkinter Entry widget, which can be used to select from a fixed number of values.

Syntax

Here is the simple syntax to create this widget:

```
w = Spinbox( master, option, ... )
```

Parameters

- master: This represents the parent window.
- options: Here is the list of most commonly used options for this widget. These options can be used as key-value pairs separated by commas.

Option	Description
--------	-------------
