

## Single Statement Suites

---

If the suite of an **if** clause consists only of a single line, it may go on the same line as the header statement.

Here is an example of a **one-line if** clause:

```
#!/usr/bin/python

var = 100

if ( var == 100 ) : print "Value of expression is 100"
print "Good bye!"
```

When the above code is executed, it produces the following result:

```
Value of expression is 100
Good bye!
```
