

## Description

The method **isdecimal()** checks whether the string consists of only decimal characters. This method are present only on unicode objects.

**Note:** To define a string as Unicode, one simply prefixes a 'u' to the opening quotation mark of the assignment. Below is the example.

## Syntax

Following is the syntax for **isdecimal()** method:

```
str.isdecimal()
```

## Parameters

- NA

## Return Value

This method returns true if all characters in the string are decimal, false otherwise.

## Example

The following example shows the usage of isdecimal() method.

```
#!/usr/bin/python

str = u"this2009";
print str.isdecimal();

str = u"23443434";
print str.isdecimal();
```

When we run above program, it produces following result:

```
False
```

```
True
```
