

```

        ('Mac', 'Mohan', 20, 'M', 2000)

try:
    # Execute the SQL command
    cursor.execute(sql)

    # Commit your changes in the database
    db.commit()

except:
    # Rollback in case there is any error
    db.rollback()

# disconnect from server
db.close()

```

Example

Following code segment is another form of execution where you can pass parameters directly:

```

.....
user_id = "test123"
password = "password"

con.execute('insert into Login values("%s", "%s")' % \
            (user_id, password))
.....

```

READ Operation

READ Operation on any database means to fetch some useful information from the database.
