

- 54. **highlightcolor:** Foreground color of the highlight region when the widget has focus.
- 55. **selectbackground:** Background color for the selected items of the widget.
- 56. **selectforeground:** Foreground color for the selected items of the widget.

57.Fonts

There may be up to three ways to specify type style.

Simple Tuple Fonts

As a tuple whose first element is the font family, followed by a size in points, optionally followed by a string containing one or more of the style modifiers bold, italic, underline and overstrike.

Example

- 58. **("Helvetica", "16")** for a 16-point Helvetica regular.
- 59. **("Times", "24", "bold italic")** for a 24-point Times bold italic.

Font object Fonts

You can create a "font object" by importing the tkFont module and using its Font class constructor:

```
import tkFont

font = tkFont.Font ( option, ... )
```

Here is the list of options:

- 60. **family:** The font family name as a string.
- 61. **size:** The font height as an integer in points. To get a font n pixels high, use -n.
- 62. **weight:** "bold" for boldface, "normal" for regular weight.
- 63. **slant:** "italic" for italic, "roman" for unslanted.
