

This method return a value for the given key. If key is not available, then returns default value None.

Example

The following example shows the usage of get() method.

```
#!/usr/bin/python

dict = {'Name': 'Zabra', 'Age': 7}

print "Value : %s" % dict.get('Age')
print "Value : %s" % dict.get('Education', "Never")
```

When we run above program, it produces the following result:

```
Value : 7
Value : Never
```

65. Dict.has_key(key)

Description

The method **has_key()** returns true if a given *key* is available in the dictionary, otherwise it returns a false.

Syntax

Following is the syntax for **has_key()** method:

```
dict.has_key(key)
```

Parameters

- **key** -- This is the Key to be searched in the dictionary.

Return Value

This method return true if a given key is available in the dictionary, otherwise it returns a false.

Example

The following example shows the usage of has_key() method.
