

The following example shows the usage of len() method.

```
#!/usr/bin/python

dict = {'Name': 'Zara', 'Age': 7};

print "Length : %d" % len (dict)
```

When we run above program, it produces following result:

```
Length : 2
```

59. str(dict)

Description

The method **str()** produces a printable string representation of a dictionary.

Syntax

Following is the syntax for **str()** method:

```
str(dict)
```

Parameters

- **dict** -- This is the dictionary.

Return Value

This method returns string representation.

Example

The following example shows the usage of str() method.

```
#!/usr/bin/python

dict = {'Name': 'Zara', 'Age': 7};

print "Equivalent String : %s" % str (dict)
```

When we run above program, it produces following result:

```
Equivalent String : {'Age': 7, 'Name': 'Zara'}
```
