

The anchor constants are shown in this diagram:

76. Relief styles

The relief style of a widget refers to certain simulated 3-D effects around the outside of the widget. Here is a screenshot of a row of buttons exhibiting all the possible relief styles:

Here is list of possible constants which can be used for relief attribute.

- | | |
|-----|---------------|
| 77. | FLAT |
| 78. | RAISED |
| 79. | SUNKEN |
| 80. | GROOVE |
| 81. | RIDGE |

Example

```
from Tkinter import *
import Tkinter

top = Tkinter.Tk()

B1 = Tkinter.Button(top, text ="FLAT", relief=FLAT )
B2 = Tkinter.Button(top, text ="RAISED", relief=RAISED )
```
