```
   subject = form.getvalue('subject')

else:

   subject = "Not set"

print "Content-type:text/html\r\n\r\n"

print "<html>"

print "<head>"

print "<title>Radio - Fourth CGI Program</title>"

print "</head>"

print "<body>"

print "<h2> Selected Subject is %s</h2>" % subject

print "</body>"

print "</html>"
```

Passing Text Area Data to CGI Program

TEXTAREA element is used when multiline text has to be passed to the CGI Program.

Here is example HTML code for a form with a TEXTAREA box:

```
<form action="/cgi-bin/textarea.py" method="post" target="_blank">

<textarea name="textcontent" cols="40" rows="4">

Type your text here...

</textarea>

<input type="submit" value="Submit" />

</form>
```

The result of this code is the following form:
