NA

Return Value

This method returns the integer file descriptor.

Example

The following example shows the usage of fileno() method.

```python
#!/usr/bin/python

# Open a file

fo = open("foo.txt", "wb")

print "Name of the file: ", fo.name

fid = fo.fileno()

print "File Descriptor: ", fid

# Close opend file

fo.close()
```

When we run above program, it produces following result:

```
Name of the file:  foo.txt

File Descriptor:  3
```

4. File.isatty()
Description

The method **isatty()** returns True if the file is connected (is associated with a terminal device) to a tty(-like) device, else False.

Syntax

Following is the syntax for **isatty()** method:

```
fileObject.isatty();
```

Parameters
